Leonel Braginski

leobraginski@gmail.com | My LinkedIn | github.com/LeoBrasileo

Professional Summary

Computer scientist with vast experience across industry and academia. Delivering end-to-end solutions to international clients. Complements professional practice with academic experience in both research and teaching. Interested in ML, compilers and High Performance systems.

Work Experience

Graduate Teaching Assistant – Algorithms and Data Structures March 2025 – Present

Faculty of Exact and Natural Sciences, UBA

- Guide students in understanding fundamental algorithms, data structures, computational complexity, and problem-solving techniques.
- Prepare and evaluate practical assignments on the design and implementation of advanced data structures.

Teaching Assistant – Programming Languages Paradigms August. 2026 – Present

Faculty of Exact and Natural Sciences, UBA

- Teach functional programming, logic programming, OOP and theoretical CS concepts.

Research Intern – High-Performance Computing March. 2026 – Present

Faculty of Exact and Natural Sciences, UBA

- Recipient of a research scholarship supporting MSc thesis work in high-performance computing.
- Research on compiler optimizations for machine learning workloads.

Mobile & Backend Developer March 2023 – May. 2025

Freelance — Upwork

- International freelance contracts focusing on mobile and backend development.
- Built and maintained scalable backend services using Java Spring Boot, deploying applications on AWS infrastructure.
- Containerized backend services using Docker to ensure reproducible environments and scalable deployments.
- Developed Android applications using Kotlin, MVVM architecture, Jetpack Compose, Firebase connections and Google Cloud deployment. Emphasizing clean and maintainable code.
- Maintained Top Rated status on Upwork with 100% Job Success across multiple contracts and contributed to applications with over 250K active users..

Software Developer May. 2025 – December. 2025

MRM Analytics

- Developed and maintained constraint solver models and machine learning systems for distributed computing environments.
- Worked on AI models for financial inference and predictive analytics using AWS-based infrastructure.
- Worked with computer vision models for real-time image detection project.

Full Stack Developer October 2020 – July 2022

4i Platform

- Development and maintenance of software products for industrial process automation and monitoring.
- Collection of production data and automatic performance calculations.
- Developed an OPC UA production plant simulator using C#.

Technical Skills

Programming Languages: Python, Java, Kotlin, C, C++, C#, Assembly x86, Verilog, Haskell
Artificial Intelligence: LangChain, GraphLang, inference pipelines, model deployment, AI pipelining, OpenAI/Anthropic API integration
Databases: PostgreSQL, SQL, SQLServer, SQLite, Firebase, Elasticsearch, MongoDB, Redis, Room
Backend: Node.js, .NET Core and .NET Framework, Python FastAPI, Java Spring Boot
Cloud & DevOps: AWS (EC2, S3, RDS, Lambda, VPC, ECR, EKS), Docker, Kubernetes, CI/CD
System Programming: Experience with low-level programming and SIMD ASM/RISC-V
Tools: Git, Linux, Bash, Docker, Kubernetes, CMake, NumPy, SciPy, PyTorch, Jetbrains IDEs, Postman
Languages: Spanish (native), English (C2)

Projects

Movie Genre Prediction using NLP | *Machine Learning, NumPy, C++* July 2024 - November 2024

- Developed an end-to-end ML pipeline for text classification to predict movie genres from plot descriptions, applying classic ML and deep learning.
- Optimized numerical methods in C++ to improve computation speed in linear algebra features.

Dual-Core Memory System for RISC-V Processor | *HPC, Verilog/VHDL* Sept. 2025 – Mar. 2026

- Research internship at European Processor Initiative (EPI) in the context of Erasmus+ mobility.
- Leveraged concurrent ARM cores to manage the RISC-V memory subsystem and validated the architecture on hardware, evaluating throughput and synchronization behavior.

Education

Faculty of Exact and Natural Sciences (FCEyN, UBA)

Computer Science (BSc + MSc) — Final Thesis in progress *Mar. 2020 – Dec. 2026*

- Focus on Machine Learning systems, computer architecture, and high-performance computing.
- Strong foundation in theoretical computer science, including algorithms, data structures, and computational complexity.
- Selected for the Erasmus+ international mobility program; exchange and internship semester at the University of Zagreb.

ORT Technical School

High School Diploma in Computer Science with a Specialization in Mechatronics *Jan. 2014 – Dec 2019*
